Lubricants & Fluids Limited Warranty

Each **BLU Synthetic Technician Series** branded lubricant or fluid; is formulated, to meet or exceed Original Equipment Manufacturers' (OEMs') performance specifications, as identified within the BLU Synthetic Product Application Guide. When selecting a BLU Synthetic Technician Series branded lubricant or fluid to match your OEM's required specification, BLU Canada Limited guarantees its performance so long as the lubricant or fluid; is used, in accordance with the OEM's usage recommendations and service/ installation procedures.

BLU Canada Limited assumes full responsibility for any component failure directly attributed to a correctly selected BLU Synthetic Technician Series branded lubricant. So long as the OEM's usage recommendations and service/installation procedures for the lubricant or fluid and component have been followed and documented in full.

The BLU Canada Limited Lubricants & Fluid Warranty is confirmation of BLU Canada Limited's commitment to high standards of product quality and customer satisfaction.

This limited warranty applies to only "BLU Synthetic Technicians Series" branded lubricants and fluids, all other products produced and marketed under the BLU Synthetic brand do not qualify under this limited warranty. For complete warranty details, please contact your local BLU Synthetic representative.

5W-50 BLU solution

5W-50 is an excellent replacement for high mileage (outside of warranty) European engines originally requiring 5W-40. This 5W-50 delivers the same cold crank efficiency, but increased high temperature durability in older and high mileage engines.

RECOMMENDED USAGE:

- High mileage engines
- Severe driving conditions:
 - Heavy loads
 - High temperatures
 - Modified engines
 - Towing vehicles

Notes: Engine Lubricants

- ⁽¹⁾ Only use where viscosity is recommended by an automaker
- ⁽²⁾ Supports extended drain intervals when defined by automakers listed, consult owner's manual
- ⁽³⁾ Excluding BMW M-Series Engines
- ⁽⁴⁾ Excluding Mercedes Benz AMG and SLR Engines
- ⁽⁵⁾ Excluding Acura/Honda HTO-06
- ⁽⁶⁾ Excluding R5 and V10 Diesel Engines
- ⁽⁷⁾ Excluding high mileage engines, use 5W-40 instead

Consult vehicle owner's manual for the correct engine lubricant specification and drain interval period.

Automatic Transmission Fluids – ATF

MTF – Synchronizer Performance

One of the key requirements of a manual transmission fluid (MTF) is to maintain proper synchronizer compatibility and shift quality for the life of the fluid. BLU Synthetic 75W-80 & 75W-90 Technician Series MTF-FS has proven to perform exceptionally well within a variety of synchronizer systems, including brass synchronizers, when compared with engine oils or API

GL-4 fluids. Here BLU Synthetic 75W-80 & 75W-90 Technician Series MTF-FS passes synchronizer testing with excellent friction and low wear rates on synchronizer parts, where some engine oils and API GL-4 fluids caused significant wear of synchronizer parts. This wear causes poor shift quality, which can ultimately result in transmission failure.

BLU Synthetic 75W-80 & 75W-90 Technician Series MTF-FS is formulated using synthetic base stocks that provide consistent viscosity in both hot and cold temperatures as well as the correct coefficient of friction necessary for smooth synchronizer engagement, helping eliminate harsh shifts.

75W-90 Technician Series MTF-FS

BLU Technical Videos

For more information please see our technical video at www.BLUsynthetic.com

Notes: Manual Transmission Fluids – MTF

Excluding manual transmissions and transaxles requiring an API: GL-5 fluid

Excluding heavy-duty or commercial applications

75W-90 Technician Series TDL-FS		
APPLICATION:*		
■ Axles		
■ Differentials		
■ Manual Transmissions (Synchronized)		
■ Manual Transmissions (Non-Synchronized)		
*Excluding API: GL-4 Applications		
POUR POINT:	-57C / -70F	
RECOMMENDED APPLICATIONS:

For more information please see our technical video at www.BLUsynthetic.com

Notes: Gear Lubricants

Gear lubricants contain **no** Limited Slip Differential (LSD) additive, add if necessary, or see BLU Synthetic Gear Lubricants with LSD additive.

Do not use in manual transmission or transaxles requiring API: GL-4 lubricant.

Notes: Gear Lubricants with LSD Additive

Designed for clutch type Limited Slip Differentials. However, there may be instances when axle chatter occurs. If so, it is acceptable to add additional limited slip additive if necessary.

Do not use in manual transmission or transaxle applications.

Notes: Power Steering Fluid – PSF

Recommended for use only in Power Steering units.

Some Power Steering applications require the use of an Automatic Transmission Fluid (ATF), please see BLU Synthetic ATF Technician Series MV-FS for applications requiring and ATF.

BLU Balance

BLU hybrid organic acid technology (HOAT) coolant is formulated with a proprietary stabilization system to improve the durability of its carboxylate salt base and extend its range of compatibility with both conventional inorganic salts and OAT-type antifreezes. BLU coolant contain no phosphates, borates, nitrates, or silicates and provide a service life up to 250,000 km, or 2,000 hours, or five years, whichever comes first.

This extended life coolant possesses multiple complex carboxylic acid derivatives along with nitrite to protect all six standard metal alloys (brass, copper, steel, solder, cast iron and aluminum). These low foaming carboxylates and additives, plus other proprietary ingredients, not only provide broad-range metal protection but also guard the cooling system against corrosion and cavitation-erosion. In addition it contains additives to minimize hot surface scaling while also preventing heat transfer surface fouling due to minor oil leakage.

BLU coolant is designed for use within a wide range of automobiles and light duty trucks regardless of fuel type built by American, European, or Asian OEMs (see application list). This product is dyed yellow, which allows it to be used as top-up within a variety of automobile or light duty truck applications without changing the existing coolant color. BLU coolant is recommended for use in general service applications where cooling system warranty maintenance is not required.

Coolant FYI's

1. Water Quality

Water quality not only affects the rust/corrosion inhibitors in some anti-freezes, but it may contribute to electrolytic corrosion in the cooling system, which can produce deposits that affect coolant flow and heat transfer. And if the water is very hard, certain anti-freeze inhibitors (particularly phosphates) may react with the calcium and magnesium (and even iron) in hard water to produce deposits that add to the coolant flow and heat transfer problem.

2. Coolant Level

Cooling systems are designed to operate full of coolant. A system that's constantly low on coolant can be an extremely corrosive environment due to the aggressive nature of coolant vapors. After shutting off an engine, the coolant stops flowing and the engine temperature can increase dramatically in localized areas. Thus, keeping the system full can help prevent localized boiling. The best way to check an engine coolant level is to remove the radiator cap on a cold engine and make sure the coolant level is correct. If the coolant is low in the radiator, check to make sure the cap is working correctly (holding pressure) and that the transfer line to the overflow tank is not clogged.

3. Mixing Coolant Technologies

When mixing a non-extended life coolant with an extend life coolant, the recommended coolant change interval will degrade to that of that of the shorter life coolant. To maintain coolant quality and working life, completely flush the cooling system prior to filling with new coolant.

4. Coolant System Parts

When a new metal cooling system part has been installed, for instance, a new water pump, it has no corrosion protection at all. No matter what coolant the system is designed for, the worst thing to do at this point is to reinstall the old coolant. Adding fresh coolant will insure that there are enough corrosion inhibitors in the coolant to provide protection for the new components. Regardless of coolant type, adding new coolant is also recommended to avoid contamination from dirt, oil or other chemicals that are common in the shop.

5. Handling Practices

The primary limiting factor in the shelf life of a coolant is silicate instability. Since silicate will eventually polymerize to silicate gel, silicate containing coolants have a shelf life of about 18 months. BLU coolant is silicate-free and therefore can be stored for at least 5 years, provided the integrity of the container is maintained. Product should be agitated before use.

6. Product Dilution

Overdosing will impact freeze protection or under-dosing (adding too much water to the coolant system without sufficient corrosion inhibitor) will create corrosion performance issues in any engine coolant system. Do not dilute concentrated BLU coolant with more than 60% water.

HOAT Technician Series MV-LLC (50:50)

APPLICATION:

- Automotive Coolant Systems
- Gasoline & Light Duty Diesel

COLOUR / COLOR YELLOW
